Program Summary

About Event

Competitive Programming is a mental sport which enables students to code a given problem under provided constraints. The purpose of this seminar was to guide every individual possessing a desire to excel in this sport. Once you enter in programming you just don't learn how to code but you also learn the “art of thinking”, by breaking your code into smaller chunks and then using your logic-based creativity to solve a problem from different angles.

Objectives

- Designing an efficient algorithm and writing a bug-free code that can withstand rigorous testing are some of the core skills essential to get a decent job or internship. The purpose of competitive programming is to cultivate these skills by solving increasingly difficult problems.
- The primary objective of this seminar was to introduce the participants to the process of competitive programming and to provide the background knowledge of algorithms necessary to solve problems on the platforms hosting programming contests. The secondary aim of this seminar was to prepare the participants for online programming contests and hackathons so that their performance in such events would improve.
